**RE: Letter of Intent for Proposed Tesla Electric Vehicle Charger to be located at
4950 Peachtree Industrial Blvd. Chamblee, GA 30341
Variance with Approval from City Council**

City of Chamblee Planning and City Council,

Tesla has entered into an agreement with Lowes Home Centers LLC, to install an Electric Vehicle Charging Station (EVCS) in a portion of the existing parking lot of the Lowes Home Improvement store located at 4950 Peachtree Industrial Blvd. Chamblee, GA 30341.

The EVCS will be comprised of (4) Tesla Superchargers, (16) Tesla Standalone V4 Charging Posts, (1) 2000A switchgear, and (1) utility transformer foundation.

Tesla is seeking a variance from the requirement listed in Section 230-27(g) of the City of Chamblee's UDO which states: "Accessory mechanical systems and features are not permitted between a building and a public street."

Tesla proposes to install the EVCS in the section of the Lowes parking area that abuts Peachtree Industrial Blvd as shown on the plans for the EVCS prepared by Dewberry and submitted as part of the application for Variance approval. As all the parking spaces at this location are in front of the building, the equipment does not have any available space to be placed other than between the building and the street.

Besides the lack of available parking located behind the building, this location along Peachtree Industrial Blvd was selected for several additional reasons. This charging station would be in operation 24 hours a day and available for use at all different times, including at night. This location is then preferable for the safety of those who will be using the site. This section of parking spots also met Lowe's criteria as it was not their most used spaces and not within their storage spaces on the property.

The Applicants' proposed location was selected to serve not only the Lowes store, but local infrastructure as well by bringing additional customers to the surrounding area. The proposed location for this electric vehicle charging station at an existing establishment is ideal. It can be implemented without affecting the existing flow of traffic and making EVC charging stations

more easily accessible. To better fit the transformer equipment into the proposed location along Peachtree Industrial Blvd, Tesla is also planning to install some additional landscape fencing around the equipment in order to screen it and block the visibility further from public view.
